Instagram Engagement Strategy

Alfido Tech | Data Science Internship – Task 3

Dataset Snapshot & Key Findings

Dataset: 7,488 comment records and 8 columns. Emoji use is evenly split: 3,744 “yes” and 3,744 “no” (50% each). Average hashtags used per comment: 2.42. Two hashtags is the most frequent count (2,496 records). Hashtag counts: 0=624, 1=1,872, 2=2,496, and each of 3, 4, 5, 6=624.

Data limitation: all rows have the same created timestamp (2023-04-13 08:04:00) and posted date (April 14). The dataset has no post-level likes or follower counts. Best posting times, likes-per-follower engagement, and follower growth therefore cannot be reliably calculated. Recommendations below are hypotheses to test, not measured findings.

Recommended Weekly Content Calendar (Test Plan)

Day	Content idea	Format / CTA
Monday	Quick tech tip or Python/Data Science mini lesson	Carousel; “Save this tip”
Tuesday	Short tutorial or tool demo	Reel; “Try it and comment”
Wednesday	Poll, quiz, or “Which would you choose?”	Stories; poll sticker
Thursday	Project walkthrough / before-and-after insight	Carousel or Reel; ask a question
Friday	Internship, learning, or team highlight	Photo/Reel; invite questions
Saturday	Mini challenge, quiz answer, or practical checklist	Stories + carousel; “Share with a friend”
Sunday	Weekly recap and audience feedback	Stories; question box

Five Strategies to Improve Engagement

1. Publish useful, saveable content: short tutorials, checklists, project breakdowns, and beginner-friendly tech tips.

2. Use clear calls to action: ask one specific question, invite a choice, or encourage saving/sharing when relevant.

3. Test formats: compare Reels, carousels, and Stories on similar topics; don’t assume one format always wins.

4. Use relevant hashtags: test a small set of 3–5 topic-specific tags, then compare results. The dataset average of 2.42 is descriptive, not proof of an optimal count.

5. Build community: reply to comments, use polls and Q&A; stickers, feature learner projects, and track recurring questions.

Measurement Plan

For every post, record date/time, format, topic, hashtags, reach, likes, comments, shares, saves, profile visits, and follower change. Engagement by reach = (likes + comments + shares + saves) ÷ reach × 100. Track follower change weekly. Compare results across 3–4 weeks using Instagram Insights and similar formats/topics.

Prepared for Alfido Tech internship. This schedule is a starting experiment; adjust it using actual Instagram Insights.
